Automated Remediation for Custom Code

When It Comes to Software Development, Don't Sacrifice Security for Speed

WhiteSource Cure is the first-ever security auto-remediation application designed for custom code. It eliminates the trade-off between security and speed when releasing software.

Release Secure Software at Scale

Struggling to address a growing backlog of security vulnerabilities while keeping up with release schedules?

You're not alone. WhiteSource customer feedback shows developers spend, on average, half a day fixing a single vulnerability, which can add up to enormous delays in product releases.

Your Personal Security Expert

WhiteSource Cure acts as a developer's personal security expert, speeding up delivery while also reducing their workload.

Key Benefits

Accelerates the Release
of Secure Software

Looks as if You
Wrote It Yourself

Integrates Into Your
DevOps Pipeline

In addition to a commercial offering, WhiteSource is also making available a Community Edition of WhiteSource Cure, for open source projects that will forever be available for free to developers working on those projects.

Community Edition: How It Works

A Free-Forever Developer Tool

Simply enter your public repository URL (e.g., <https://github.com/payara/Payara>) and a SARIF file to generate an executable remediation report.

Developers can either apply the remediation suggested by WhiteSource Cure as a pull request in a DevOps pipeline, or they can use it to fine-tune their code as they see fit.

Executable remediation report

Your customized report includes remediation suggestions for vulnerabilities detected in your public project.

WhiteSource Cure provides fix suggestions that automatically remediate vulnerabilities in your code as if you wrote them yourself.

IDE Plugin

All your remediation suggestions are available right in your IDE. To apply your fix at the click of a button, simply review and accept the proposed secure code.

WhiteSource Cure suggestions are case specific, accurate, and effortless to save you valuable time and promote secure coding. You can even use WhiteSource Cure to learn new remediation methods.
